

DOVOMAXX

Multi Enzyme Combination

DESCRIPTION

DOVOMAXX is a scientifically tested, synergistic and perfectly balanced combination of different enzymes. It breaks down the Non-Starch Polysaccharides (NSPs), protein, crude fibre and crude fat present in corn, soya, DORB, etc. The synergistic combination of enzymes enhances energy release and protein bound with NSPs.

DOVOMAXX

Multi Enzyme Combination

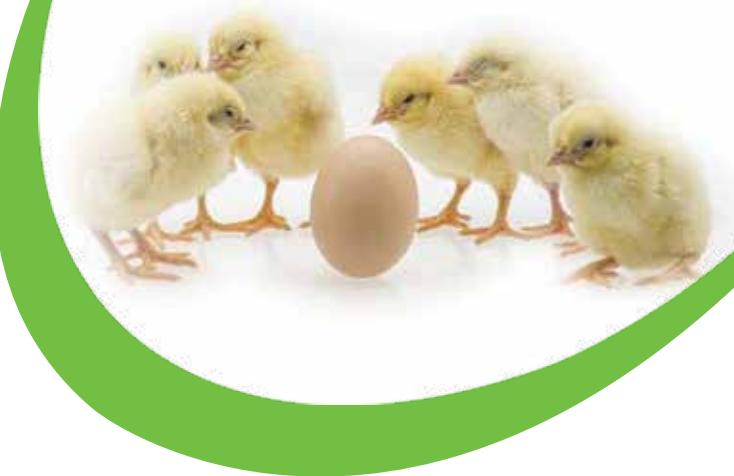

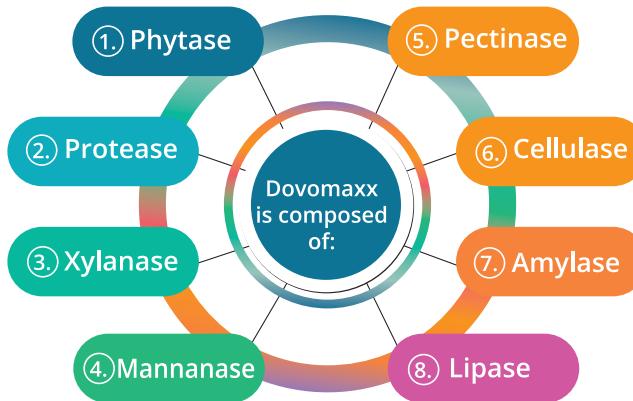

DOVOMAXX

A cost effective enzyme combination to enhance the feed performance

Poultry feed contains various Anti-Nutritional Factors (ANFS) that hampers the feed nutrient absorption and its utilization. Dovomaxx is a blend of different Enzymes that degrade these ANF'S to support the nutrient availability in the feedstuff thus enhancing the performance of the poultry birds.

Dovomaxx works on different kind of substrates and capture complete nutritional value by degrading different ANF'S in different conditions, thus improving the bioavailability of Proteins, Energy, Minerals (Phosphorous) and Vitamins etc.

COMPOSITION

CHARACTERISTICS

- 1. Reduces gut viscosity.
- 2. Releases hidden nutrients for better utilization.
- 3. Improves weight gain and FCR.
- 4. Allows to economise feed formulation / Least Cost Formulation.

BENEFITS

- Increases the flexibility of formulating the feed, resulting in better performance of the birds, without adding any extra cost to the feed.
- Increases the availability of Proteins (Amino acids), metabolizable Energy, Vitamins and Minerals like Calcium, Phosphorus, Magnesium etc
- Reduces the viscosity of the gut, resulting into proper passage of the ingesta, reducing the loose dropping and avoiding the wet litter conditions.
- Improves the intestinal mucosal integrity and intestinal immunity.
- Increases feed intake, weight gain and improved FCR.

PACK SIZE

Available in 1 kg Pack.

DOSAGE

250 GM/TON OF FEED
OR As recommended by nutritionist.
