

# MastiGo

Technical Leaflet

## A preparation for the prevention and treatment of mastitis

Mastitis is the most prevalent and costly disease that affects dairy cows. Producers have been struggling to corner the disease for years, but it continues to be the single largest obstacle for the dairy industry. The ability to detect mastitis early and do something about it can have a significant impact on milk production, milk quality and herd health.

Subclinical mastitis infections affect the dairy producer's bottom line by reducing milk production, decreasing milk quality, and suppressing reproductive performance. Cows with a high Somatic Cell Count (SCC) indicative of subclinical mastitis on the first milk test have an estimated loss in milk production.

### Contents:

- Serratiopeptidase
- Vitamin E
- L-Arginine
- Selenium
- Inulin
- Tri Sodium Citrate
- Circuma longa(Turmeric)
- Occimum sanctum (Tulsi)

### Indications :

- Reduces Somatic Cell count
- Brings down subclinical mastitis
- Reduces the incidence of mastitis
- Improves quality of milk

### Dosage :

30 gm twice daily for 5 to 7 days

MASTIGO is an unique combination, Most of the ingredients in MASTIGO like inulin, L Arginine, Trisodium citrate help in reduction of somatic cell count. Other ingredients reduce inflammation and infection.

**Packing : 120 gm**
