

VARSHA-CAL Suspension

Think for more production

The requirement of calcium in modern day poultry & dairy is enormous. A major portion of dietary calcium is used in bone formation in poultry & dairy and for milk production in milking cow. Milking cows requires more calcium because of calcium carbonate content in milk. It is also well documented that as age advances the ability to absorb dietary calcium decreases.

The control of calcium and phosphorus metabolism in poultry & dairy is a complex phenomenon involving vitamin D3, Parathormone from the parathyroid gland and calcitonin from the C cells of the thyroid glands.

CONTENTS:

Each 20 ml contains :

Soluble Calcium-Salts	500 mg
Phosphorus	300 mg
Magnesium	200 mg
Vitamin D3	50 mg
Vitamin B12	30 mg

UNIQUE FEATURES:

Prevent leg weakness & paralysis
Prevent Prolapsed & Egg bound.
Reduce thin shelled egg
Helps to formation of skeleton for better growth
Better egg & meat production

Increase milk production & prevent milk fever
Helps in body weight growth
Prepares animal for breeding & pregnancy
Optimizes functioning of reproductive system & pregnancy
Check unhealthy skeletal & skin tissues
Prevent the complication during parturition

DIRECTION FOR USE:

Broiler / Layer : 1 ml per liter of water for 3 - 5 days
Cattle / Buffalo : 100 - 150ml / day / Animal
Calf / Goat : 20 - 25ml / day / Animal
or as directed by Nutritionist/Veterinarian.

Packing: 1 Liter, 5 Liter & 50 Liter

Marketed by

AVON
animal health
Uttara Dhaka 1230 Bangladesh

Manufactured by

An ISO 22000:2005 & GMP certified company
